

Product Layout:

Basic Parameters:

- Using high-performance VS11K09A-1 MCU design, full speed USB communication protocol, can meet the speed requirement in competitive game, support USB update online
- The keyboard with 68 key design, it can arrive 86 key standard key and multimedia through FN combination. You can define macros and light-timing by driver.
- The wire is full copper wire, Type-C connect design, wire length is 1.6 Meter
- We choose high quality international A level 1.6mm FR-4 double PCB circuit board
- Flash memory, Support power off storage (64K Rom)
- The keyboard with RGB backlit, Each LED light with 256 grade PWM, with various cool light effect, add color for the game. Full keyboard customization is supported
- compatible with Windows series, Android, Linux, IOS ect (multimedia key just subject for Windows)
- real mechanical keyboard, all keys no conflict
- current: 300mA
- frequency: 48Mhz
- voltage: 4.5 ~ 5.5V
- interface: USB 2.0

Multimedia and special function keys:

- FN+ = Three second=Restore factory settings
- FN+ = F1; FN+ = F2; FN+ = F3;
- FN+ = F4; FN+ = F5; FN+ = F6;
- FN+ = F7; FN+ = F8; FN+ = F9;
- FN+ = F10; FN+ = F11; FN+ = F12;
- FN+ = turn off/on backlight(default turn on);
- FN+ = Lock/open keyboard, default open, when keyboard is locked, Capslock key will flash white light, open keyboard will default;
- FN+ = switch backlight mode(18 kinds of light effect cycle);
- FN+ = homepage; FN+ = my computer; FN+ = email;
- FN+ = Music (computer system default: Windows Media Player);
- FN+ = calculator FN+ = Switch to PC mode FN+ = PrtSc;

- FN+ =Scr LK(After press FN+ ,when use direction key can change page in Excel ,press FN+ again,when use direction key ,you can change to another line in Excel);
- FN+ =Volume plus; FN+ =Volume down; FN+ =Mute/on;
- FN+ = Backlit recording, Capslock key will flash white light, when recording finished, flash end;
- FN+ =previous song; FN+ =Next song; FN+ =play/stop;
- FN+ =stop; FN+ =INS;
- FN+ = enter game mode: A、S、D、W、↑、↓、←、→LED backlight turn on
- FN+ =switch to another color(red、orange、yellow、green、cyan、blue、purple、white、9 kinds of color cycle) FN+ =END;
- FN+ =change backlight direction
- FN+ =lock/open Windows、APP,default open(when it is locked WIN key backlight with white light)
- FN+ = backlight speed up (Only for dynamic backlight, can change 9 times, when arrive limited, right/left direction key with white flash light);
- FN+ =Backlight slows down(Only for dynamic backlight, can change 9 times, when arrive limited, right/left direction key with white flash light);
- FN+ =backlight brightness reduce(when arrive limited, direction key will flash white light);
- FN+ =Backlight brightness increases(when arrive limited, direction key will flash white light);

Keyboard customization mode:

- Please log in to download the corresponding keyboard driver:
<http://en.freewolfgaming.com.cn/Download.aspx?ClassID=26>
- Edit the keyboard setting effects you want according to the customized operating instructions, such as keyboard functions, lighting effects, etc.

Shift +key with follow function(like the picture)

FN+Shift+ → ~
