

Large Figure Storage Box

56 figure capacity

WARNING!
Polyurethane
Foam is
Flammable

Do not expose polyurethane foam to smoking materials, light, heat, open flames, sparks, or any other sufficient source of heat or flame. Some types of polyurethane foam will burn, melt, char, and release great heat and toxic or flammable gases, and some released by the burning foam can be poisonous. Use all heat in moderation.

Batteries™ & miniature not included

This case contains foam with 56 die-cut spaces that will completely encase each painted figure for maximum protection. The compartments measure 1.54" x 2" x 0.71".

A heavy cardboard separator is placed between levels to keep spaces flat. A US tab is attached to the topboard for easy removal of the top level.

56 compartments
for 25mm Miniature
Figurines

Soft Foam to Protect
Painted Miniatures

Durable
Polypropylene Case

Ideal method for
Storage and Transportation

Secure Latches and
Long-Life Hinges

Hints for use:

To obtain a sturdier environment for your figures, we suggest you attach the bottom sheet of this foam to the thicker sheet containing the cut out areas. With the cut-outs removed, apply either white glue or contact cement to the edges and intersections of the bottom of the thicker piece of foam and attach to a flat piece of foam. This should help give the walls of the compartments more stability when they are holding a figure.

For larger figures, cut the dividing walls of the thicker foam sheet and fold the walls back.

For even larger figures, merge the foam inserts by placing the two thicker foam die cut sheets together at one top of each other to form 1.54" x 2" x 1.18" and 2.18" x 1.54" x 1.18" sections.

If just a few of these sections are required, cut a hole through the poly-board separator and fit foam walls to form large spaces for your oversized figures like goblins and dragons.
