

User's Manual

Guidelines for the use of animal repeller

Thank you for choosing this animal repeller. Please read and understand these instructions and keep this manual for future reference. This repeller is designed for permanent service allowing you to install it once and let it work! It's weather-proof allowing it to work all year-round and in virtually all weather conditions. It uses solar power to recharge the batteries so it's always working. The passive infrared sensor (PIR) detects motions and triggers the ultrasonic speaker emitting a tone that people can't hear but chase away common outdoor pests like dogs, cats, deer, raccoons, mice, skunks, squirrels and more. This solar animal repeller is a safe and humane way to keep unwanted animals away!

WARNING!

Always check for underground utilities, cables or wires before digging or installing! Failure to check could result in personal injury, property damage or even death.

Parts & Features:

FIGURE 1

To Assemble & Install:

- 1) Unpack the unit completely and confirm that all parts are present. SEE FIGURES 1-3 above.
- 2) Connect the repeller head, pole sections, connecting part and ground stake. SEE FIGURES 1-3 above.
- 3) Turn power switch to "ON" position. SEE FIGURES 2.
- 4) The PIR repeller is designed to be left ON continuously. It uses four 2/3AA size NI-MH rechargeable batteries.
- 5) Once turned ON, the Red-LED light and ultrasonic signal will activate for 15 seconds. Among the time there is sound waves for 2.5 seconds at the beginning. Following this activation. The unit will move to stand-by mode.
- 6) The unit is now ready for installation. The location should allow adequate sunlight to keep the batteries fully charged. Be sure that the area where needing protection is within the effective range of the repeller SEE FIGURES 2.
- 7) For best results, keep the repeller head roughly 9-10 inches above ground.
- 8) Tack care not to stress or break the repeller when installing on head ground. It's a good idea to prepare the ground for the ground stake to avoid damage to the unit.

- 9) When the PIR sensor detects motion, Red-LED light will be lit up. Following this, the repeller will return to stand-by mode.
- 10) When the device is working and the PIR sensor detects motion, the device will run for other 15 seconds in the next time.

Specifications:

Unit Dimensions:	5-1/2"W x 3-1/2"D x 14-1/3"H
Unit Weight:	8-1/2 Ounces
Power Supply:	4x2/3AA Ni-MH rechargeable Batteries
Power Consumption:	working=100mA standby≤10uA
Ultrasonic Frequency:	25-61KHZ
Coverage Area:	30 feet @ 1100=2,425 square feet

Caution:

- Allow the animal repeller to operate continuously for best results.
- Don't immerse repeller in water.
- Don't cover-up the PIR sensor.
- To clean the repeller, use a damp-soft cloth and mild soap with water. Don't use harsh chemicals or abrasive cleaning agents that may damage the repeller
- Please charge 2-3 hours under sunlight before first use.
