PAR38 Coloured Pro **flame sealed beam** lamps have a weatherproof coating and lamp with a distinctive *shiny lacquering* for strikingly decorative effects. They **offer 20% less energy consumption** compared to conventional colour PAR lamps. PAR38 Coloured Pro lamps are a very effective and suitable light source for illuminating large areas and floodlighting. They are especially designed for accent- and down lighting in both indoor and outdoor applications. The lamps can be installed outdoor without any protection, provided they are used in a watertight lamp holder. A heat resistant rubber gasket should be fitted between the lamp and the lamp holder. They are suitable for spectacle illumination, displays, home, hotels, restaurants, public buildings.
