

KOFIRE

UG-06

Professional wireless gaming headset+ gaming low-latency transmitter

Compatible with multiple gaming consoles

50 mm NdFeB broadband horn (50mm钕铁硼宽频喇叭)

The 50mm super-size audio driver unit has a wider sound field and a more powerful resolution. More effective restoration of the real sense of the scene

Low latency <40ms chip (低延时<40ms芯片)

The <40ms low-latency game chip greatly reduces the delay. The sound and picture are synchronized, and the sound can get feedback faster, allowing you to react faster than your opponent.

Hidden noise-cancelling microphone (可隐藏式降噪麦克风)

The concealable omnidirectional microphone design can be closer to the sounding area when the microphone is opened, which can effectively capture your voice clearly and effectively reduce the interference noise on the back and side.

3D immersive sound + EQ compensation (3D沉浸式音效+动态EQ补偿)

Put on headphones to experience 3D immersive sound effects, which will take you into the game world; automatically adjust EQ sound effects during listening to music and playing games to achieve immersive sound effects and continuous good sound output at low volume.

Ergonomic over-ear design (人体工学全包耳)

The fully-enclosing earmuff design allows the headset to fit the ear more comfortably. The wearing experience test is repeated to ensure that the user's comfort can be maintained even after long-term wearing.
