

TAC POLARIZED LENS

The lens with the TAC (Thin Anti-Reflective Coating) film can decrease glare and double reflections from water, snow, road surfaces, etc. It provides 100% protection against UV rays, reducing effects to more than 99% (depending on wavelength) and is resistant to scratches.

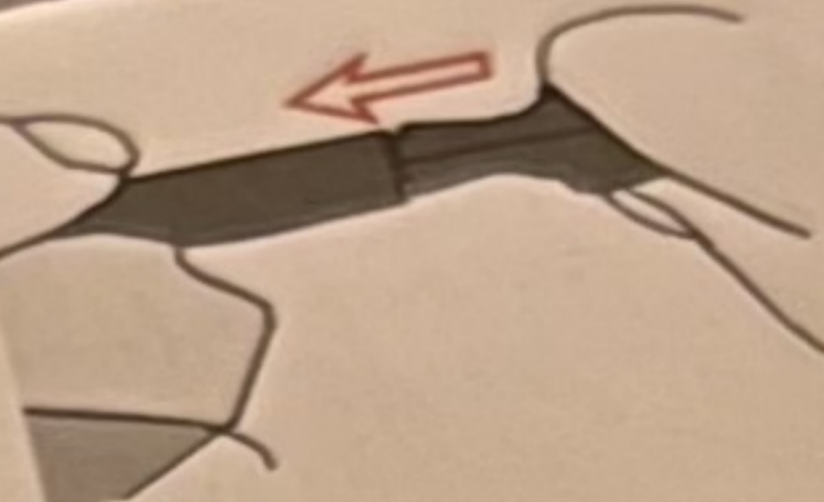

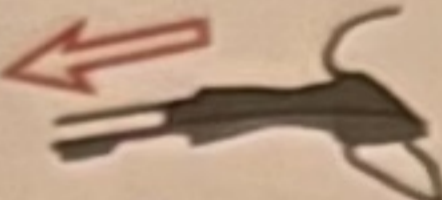

HD POLARIZED LENS

HD (High Definition) lenses with anti-scratch properties. They have excellent HD and polarization effects, reducing glare and increasing contrast. It will let you see things clearly, especially when driving at night or in low light conditions.

iii. Warranty Policy

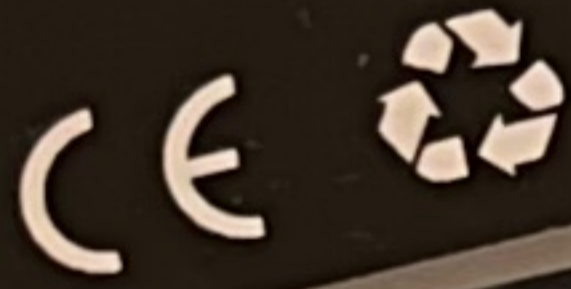

Replacing
1. The convex point of the rope is downwards, and the groove is aligned with the frame

2. Insert the cord into the groove

3. The rope is rotated 90 degrees outside
