

# Installation Rain Cover Lock

## 2022 UA models

Urban Arrow updated their reflector on 2022 models. The installation of the rain cover lock requires an additional step (in comparison to the 2021 or previous UA models) since the reflector needs to be unscrewed first.

1. Use a small flat screwdriver at the little opening to pop out the reflector.
2. Remove the reflector.
3. Use the supplied Torx tool to loosen the Torx screw (counterclockwise), don't unscrew it all the way out but leave the bolt inside.
4. Remove the plastic reflector holder, sometimes a few small tabs on the bolt are needed to get it out.
5. Use the link below for the remaining rain cover lock installation.
