

Features

TWIST TO REMOVE AIR

Using Atmos is simple: pop on the lid, twist it back and forth, and feel the tension as oxygen gets sucked out of the chamber.

GREEN MEANS GOOD TO GO

Watch the dot drop to reveal a green ring. The vacuum is now locked to prevent oxidation and extend the shelf life of your coffee by up to 50%.

PRESS TO RELEASE

The built-in silicone ring stops air, moisture, odors, and other funk from seeping in. When the contents are calling your name, press the Easy Release Button on top to release the pressure and dig in.
