These adapters meet the requirements of the CE mark and are RoHS compliant. The adapter is made of plastic and is not suitable for use in wet or humid environments. The adapter is not suitable for use in areas with high temperatures or high humidity. The adapter is not suitable for use in areas with high electromagnetic interference. The adapter is not suitable for use in areas with high magnetic fields. The adapter is not suitable for use in areas with high static electricity. The adapter is not suitable for use in areas with high voltage. The adapter is not suitable for use in areas with high current. The adapter is not suitable for use in areas with high power. The adapter is not suitable for use in areas with high frequency. The adapter is not suitable for use in areas with high speed. The adapter is not suitable for use in areas with high acceleration. The adapter is not suitable for use in areas with high vibration. The adapter is not suitable for use in areas with high shock. The adapter is not suitable for use in areas with high impact. The adapter is not suitable for use in areas with high pressure. The adapter is not suitable for use in areas with high force. The adapter is not suitable for use in areas with high torque. The adapter is not suitable for use in areas with high tension. The adapter is not suitable for use in areas with high stress. The adapter is not suitable for use in areas with high strain. The adapter is not suitable for use in areas with high deformation. The adapter is not suitable for use in areas with high elongation. The adapter is not suitable for use in areas with high contraction. The adapter is not suitable for use in areas with high expansion. The adapter is not suitable for use in areas with high compression. The adapter is not suitable for use in areas with high tension. The adapter is not suitable for use in areas with high stress. The adapter is not suitable for use in areas with high strain. The adapter is not suitable for use in areas with high deformation. The adapter is not suitable for use in areas with high elongation. The adapter is not suitable for use in areas with high contraction. The adapter is not suitable for use in areas with high expansion. The adapter is not suitable for use in areas with high compression.
